

Haloforge Cloud - Support FAQ, Pricing, and Policies

===== ABOUT HALOFORGE =====

What is Haloforge?

Haloforge is a cloud object storage and API platform designed for developers who need reliable, scalable file storage with a simple REST API. We handle storage infrastructure so engineering teams can focus on building their product instead of managing servers. Haloforge was built specifically for developers, with a focus on simple pricing, predictable performance, and minimal configuration overhead.

===== PRICING TIERS =====

Free tier is \$0/month and includes 5GB storage, 100 requests/minute, 10,000 requests/day, and community support.

Pro tier is \$29/month and includes 500GB storage, 1,000 requests/minute, 500,000 requests/day, priority email support, and webhook access.

Enterprise tier is custom-priced and includes unlimited storage, custom rate limits, a dedicated Slack channel, a 99.99% uptime SLA, and a named account manager.

===== OVERAGE PRICING =====

If you exceed your plan's included storage, you are not immediately blocked. Instead, additional storage beyond your plan's included amount is billed as overage at the following rates: Free tier overage is not available, uploads are blocked once the 5GB limit is reached. Pro tier overage is billed at \$0.10 per GB per month for any usage beyond the included 500GB. Enterprise tier overage rates are negotiated per contract and are typically lower than Pro tier rates at volume.

Overage charges are calculated based on your peak storage usage during the billing month and are added as a line item to your monthly invoice. You can set a spending alert in the dashboard to be notified by email when your projected overage charges exceed a threshold you configure.

Request overages (exceeding your requests-per-day limit) work differently: once your daily request quota is exhausted, further requests return 429 Too Many Requests until the quota resets at midnight UTC. There is no way to pay to increase your daily request quota outside of upgrading your plan tier.

===== FREE TRIAL =====

Do you offer a free trial of the Pro tier?

Yes, all new accounts get a 14-day free trial of Pro tier features automatically, no credit card required. After the trial, accounts revert to Free tier unless upgraded. You will receive an `account.trial_ending` webhook event and an email reminder 3 days before your trial expires.

===== STORAGE AND QUOTAS =====

What happens if I exceed my storage quota on Free tier?

You will receive a `bucket.quota_exceeded` webhook event if configured, and new uploads will be rejected with a 403 Forbidden response until you either delete existing objects or upgrade your plan. Existing stored objects are never deleted automatically due to quota overages.

What happens if I exceed my storage quota on Pro tier?

Unlike Free tier, Pro tier does not block uploads when you exceed your included 500GB. Instead, you continue uploading normally and are billed overage charges of \$0.10 per GB per month for the excess, as described in the Overage Pricing section above.

===== REGIONS AND DATA =====

What regions do you support?

We currently support four regions: us-east (Virginia), us-west (Oregon), eu-central (Frankfurt), and ap-southeast (Singapore). Data does not automatically replicate across regions; each bucket lives in exactly one region unless you enable our optional Cross-Region Replication add-on, priced at an additional \$0.02 per GB replicated per month.

Is my data encrypted?

Yes. All objects are encrypted at rest using AES-256, and all API traffic is encrypted in transit via TLS 1.3. Enterprise customers can optionally provide their own encryption keys through our Bring Your Own Key (BYOK) program at no additional cost.

===== SUPPORT =====

How do I get support?

Free tier users can access our community forum and documentation, with no guaranteed response time. Pro tier users get priority email support with a target response time of 24 hours on business days. Enterprise customers get a dedicated Slack channel with a target response time of 1 hour during business hours, and 4 hours for after-hours critical incidents.

Do you offer phone support?

Phone support is available only to Enterprise customers, as part of their onboarding and account management package. Free and Pro tier support is handled exclusively via community forum and email respectively.

===== BILLING =====

Can I cancel or downgrade my plan at any time?

Yes, you can upgrade, downgrade, or cancel at any time from the billing dashboard. Downgrades take effect at the start of your next billing cycle. If a downgrade would put you over your new plan's storage limit, you will be prompted to delete objects before the downgrade is finalized.

What payment methods do you accept?

We accept all major credit cards and, for Enterprise customers, wire transfer and invoicing with net-30 payment terms. We do not currently accept cryptocurrency.

Do unused requests or storage roll over month to month?

No, request quotas reset daily and storage limits are evaluated continuously rather than on a monthly cycle, so there is no concept of "rollover" for either.

===== RELIABILITY =====

Do you have a status page?

Yes, live system status and incident history are available at status.haloforge.example. We also post scheduled maintenance windows there at least 48 hours in advance. Enterprise customers with an SLA receive automatic service credits for any downtime beyond their contracted uptime guarantee, applied automatically to the following month's invoice.

What is your uptime track record?

Our trailing 12-month uptime average across all regions is 99.97%. Enterprise SLA customers are guaranteed 99.99% uptime, with service credits owed if this is not met in a given month.
