

Haloforge Cloud - Support FAQ and Pricing

What is Haloforge?

Haloforge is a cloud object storage and API platform designed for developers who need reliable, scalable file storage with a simple REST API. We handle storage infrastructure so engineering teams can focus on building their product instead of managing servers.

What are your pricing tiers?

Free tier is \$0/month and includes 5GB storage, 100 requests/minute, and community support. Pro tier is \$29/month and includes 500GB storage, 1,000 requests/minute, priority email support, and webhook access. Enterprise tier is custom-priced and includes unlimited storage, custom rate limits, a dedicated Slack channel, and a 99.99% uptime SLA.

Do you offer a free trial of the Pro tier?

Yes, all new accounts get a 14-day free trial of Pro tier features automatically, no credit card required. After the trial, accounts revert to Free tier unless upgraded.

What happens if I exceed my storage quota?

You will receive a `bucket.quota_exceeded` webhook event if configured, and new uploads will be rejected with a 403 Forbidden response until you either delete existing objects or upgrade your plan. Existing stored objects are never deleted automatically due to quota overages.

What regions do you support?

We currently support four regions: us-east (Virginia), us-west (Oregon), eu-central (Frankfurt), and ap-southeast (Singapore). Data does not automatically replicate across regions; each bucket lives in exactly one region unless you enable our optional Cross-Region Replication add-on.

Is my data encrypted?

Yes. All objects are encrypted at rest using AES-256, and all API traffic is encrypted in transit via TLS 1.3. Enterprise customers can optionally provide their own encryption keys through our Bring Your Own Key (BYOK) program.

How do I get support?

Free tier users can access our community forum and documentation. Pro tier users get priority email support with a target response time of 24 hours. Enterprise customers get a dedicated Slack channel with a target response time of 1 hour during business hours.

Can I cancel or downgrade my plan at any time?

Yes, you can upgrade, downgrade, or cancel at any time from the billing dashboard. Downgrades take effect at the start of your next billing cycle. If a downgrade would put you over your new plan's storage limit, you will be prompted to delete objects before the downgrade is finalized.

Do you have a status page?

Yes, live system status and incident history are available at status.haloforge.example. We also post scheduled maintenance windows there at least 48 hours in advance.
